

Bio-Concept

Laboratories, Inc.

CUSTOMIZING OUR SERVICES FOR YOUR VISION

Welcome To Bio-Concept Laboratories

We offer a full range of formulation development, microbiology, analytical chemistry, process development, stability programs and aseptic clinical manufacturing in ophthalmic plastic bottles and parenteral serum glass vials. Check out our services page for more information on our process.

WELCOME TO BIO-CONCEPT LABORATORIES

Bio-Concept Laboratories, Inc. is an FDA registered Contract Research Organization (CRO) and Contract Manufacturing Organization (CMO). Bio-Concept is also EU compliant. We offer a full range of product development services from pre-formulation through aseptic manufacturing and stability. Our clients are Biotechnology, Pharmaceutical and Ophthalmic companies at all stages of development from start-up to companies to industry leaders.

Our Process

- Product Development
- Formulation Technology
- Microbiology
- Analytical Chemistry
- Aseptic Fills
- Stability
- Pre-Clinical Testing
- Process Research

Ophthalmics

Our expertise in the development of ophthalmic formulations allows Bio-Concept to anticipate and address challenges that are unique to ophthalmic products. We offer specialized insight into preservative systems, ingredients, buffers, other excipients, aqueous solutions, emulsions and suspensions.

Liquid Injectables

Bio-Concept has over 25 years experience with injectables from small molecules to larger polymers and proteins. Our customized development process and hand-fill manufacturing promotes conservation of API during the early stage of development.

About Bio-Concept

About Bio-Concept Laboratories

At Bio-Concept, we have the years of practical experience and expertise to get your ophthalmic and injectable products to clinical trial quickly. The staff at Bio-Concept has extensive expertise in formulation technology, microbiology, analytical chemistry, aseptic fills, product development, stability, process research, pilot scale-up, and manufacture.

Overview

About Bio-Concept:

We offer a full range of formulation development, microbiology, analytical chemistry, process development, stability programs and aseptic clinical manufacturing Phase I-III in ophthalmic plastic bottles and parenteral serum glass vials. Our recent expansion into a 30,000 square foot facility in Salem, NH positions Bio-Concept for continued growth as we expand our services to address the needs of a diverse and growing client base with low volume commercial manufacturing.

Experience, and Expertise:

At Bio-Concept, we have the years of practical experience to get your product to clinical trial quickly. And we have particular experience with ophthalmics and injectables. The staff at Bio-Concept has extensive expertise in; formulation technology, microbiology, analytical chemistry, aseptic fills, product development, stability, process research, pilot scale-up, manufacture, and formulation science. Contact us today and see how we can help your company effectively expand its product base and realize your new product visions.

Contact Us:

If you have questions about how Bio-Concept can help you, please contact us. Contact Us today, and a program specialist will contact you.

Laboratories, Inc.

About Our Services

About Our Services:

Bio-Concept has an integrated product development program designed to bring your new product to market, efficiently and effectively. The status, strategy and assumptions are routinely reviewed with the client and modified as appropriate. Each project is assigned a project coordinator to give you and your project the personal attention both deserve.

Always Thinking Ahead:

Our experience allows us to identify, early on, the most challenging items that could potentially affect the success of the project. We also assess the validity of our approach. In this way, we can predict and overcome possible delays while minimizing your costs. Our product development process is divided into various overlapping stages.

Our Services

Ophthalmics:

Our expertise in the development of ophthalmic formulations allows Bio-Concept to anticipate and address challenges that are unique to ophthalmic products. We offer specialized insight into preservative systems, ingredients, buffers and other excipients. Aqueous solutions, emulsions, suspensions and gels are formulated and filled into plastic bottles with a dropper tip and cap. Our flexible hand-fill process allows us to customize manufacturing requirements to address a variety of fill volumes and container options.

Liquid Injectables:

Bio-Concept has over 25 years of experience with injectables from small molecules to larger polymers and proteins. Our customized development process and hand-fill manufacturing promotes conservation of API during the early stages of development. Parenterals are filled in small glass vials with rubber closures and aluminum crimp seals.
